

SOUCURE G GAS BURNER WITH STAINLESS STEEL BURNER TUBE

Corrosion-resistant burner tubes can be used to prevent corrosion caused by lacquer condensate, humidity, and oxidization as a result of thermal stress.

Using corrosion-resistant materials eliminates material oxidization inside the burner tube, guaranteeing a continuous burner function and reducing the effort needed to clean and maintain the curing units. The new shape also reduces deformation as a result of thermal influences.

New
corrosion-resistant
burner tube

ADVANTAGES

- Less maintenance work on gas burners
- No material oxidization inside the tube

AVAILABILITY

Backward compatibility guaranteed.
