

COMBO WELDING ARM FOR SOUCAN 800–2000

The COMBO welding arm offers maximum flexibility and is compatible with different roller head designs. It is now also available for high-speed welders.

The welding arm and the interchangeable front section are perfectly coordinated and verified and optimized using finite element analysis. This minimizes deformation and adjusts the welding properties to the welding process. Typically for Soudronic, the technology delivers top-notch reliability, perfect ergonomics and high-level output.

Soudronic offers the COMBO welding arm in the following combinations (Combo section shown in red):

COMBO arm 65/Ø65
with roller head Ø 65 mm

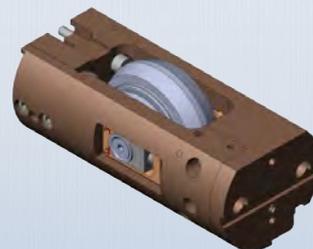

COMBO arm 65/Ø73
with roller head Ø 73 mm

COMBO arm 65/Ø99
with roller head Ø 99 mm

The COMBO welding arm consists of:

- A lower arm with a 65-mm diameter
- Front section for a roller head between 65 and 99 mm in diameter

ADVANTAGES

- The roller head diameter can be changed with minimum effort.
- Minimal investment covers different roller head diameters.
- Use of optimum roller head for specific applications increases service life.
- Roller head can be changed without removing seam coating (powder, lacquer, air) lines.

AVAILABILITY

Retrofitting possible for all SOUCAN 1000/800 machines.
